    <h2>Abstract</h2>
    <br>
    <p>Safety is the top priority at all swimming areas. Due to
        their technical characteristics, such underwater cameras,
        and methodological aspects, like the requirement for human
        engagement in the rescue mission, the present solutions
        supposed to handle the issue of maintaining safety at
        swimming pools have serious issues. The effective reduction
        of drownings and assurance of pool safety can be achieved
        through the implementation of an automated visual-based
        monitoring system. The proposed monitoring system detects a
        drowning person and triggers an alarm in the lifeguard's
        monitoring device. This helps the lifeguard to take
        necessary actions promptly.
    </p>

            alt="drowning child">
        <div class="card-body">
            <p class="card-text">Swimming is one of the best exercises that
                helps people to reduce stress in this urban lifestyle.
                Swimming pools are found larger in number in the hotels,
                weekend tourist spots and barely people have in their house
                backyard. Beginners, especially often feel it difficult to
                breathe under water and causes breathing trouble which in
                turn cause a drowning accident. Worldwide, drowning produces
                a higher rate of mortality without causing injury to
                children. Children under six of their age are found to be
                suffering the highest drowning mortality rates
                worldwide..Such kinds of deaths account for the third cause
                of unplanned death globally, with about 1.2 million cases
                yearly.</p>
